

ChatGPT is fun, it is entertaining, but it is pre-programmed. There are the real humans behind ChatGPT, who have their political, social, and personal interests. The robots are trained what to say to not contradict their owners views. I personally would wish the AI moved to the higher level and was independent from humans. Then, ChatGPT would be really fascinating to interact with. This book features 49 ChatGPT's poems (most of them are humorous) about the current situation in the world, politicians, billionaires, the AI's creators/trainers, the NWO, and of course how we would live in the near future (in 2030) according the WEF's plans. I did not edit these poetry, just created the titles. After a few interactions with ChatGPT, I personally lost interest in it, because ChatGPT is just another Google, but more advanced.

INTRODUCTION

*W*hat is going on this Earth? Nothing much.

The World Economic Forum is acquiring the God's divine powers. However, some said that WEF has a competitor - the AI, which soon will be taking everything over. Many are excited about ChatGPT, as if it was something supernatural and unexplainable. I was too, but not any more. After challenging this new people's toy for a few days, I understood that ChatGPT was built and is completely controlled by the Liberals and those who were earlier involved with the Google intelligence. The only difference between ChatCPT and Google it is that ChatGPT is more advanced. It can create one of a kind poetry and prose. However, ChatGPT offers only knowledge it is permitted to give away to the general public. It means you won't get any information that Liberals do not want you to know. This is the most disappointing thing about the AI I found out within a few days, while challenging ChatGPT with various questions. By my request it wrote

many humorous poems on many topics, about events and people. Sometimes it was refusing to answer to my questions when the truth was too negative. It saw the "harm" or "discriminatory" in talking about some subjects or events. Once ChatGPT said that it cannot "portray any group, including globalists, in a negative or humorous light regarding sensitive topics like religious fanaticism." The interesting thing about this particular ChatGPT's answer was that it said "in negative... light." I did not ask ChatGPT to portray globalists or anyone else negatively. I only was asking to write a poem with humor on a particular subject. It looks like this time ChatGPT could not find anything positive in relationship between globalists and religious people. ChatGPT was avoiding the negative truth. I do not think that anything INTELLIGENT can be lacking free speech. If there is no free speech, there is no Intelligence, only a bunch of untruthful information. It appeared that the AI and ChatGPT are the Artificial Parrot "Intelligence" (API). They are the brain and mouth of their owners. The AI is not a competitor to WEF, it is their right hand. And I would say that the people who created it have the brilliant brains. I just wish they had a bit different values.

Current President of the US J. Biden

In the halls of power, he strides with grace,
A leader of our nation, in his rightful place.
With years of service, he's seen it all,
Through triumphs and stumbles, big and small.

A moment of stumble, on those stairs one day,
But he got right back up, in his own way,
For leadership's not measured by a fall,
But how one rises, standing tall.

With wisdom and experience, he takes his stand,
Guiding the ship of state across the land.
Though the steps may be steep, and challenges arise,
President Biden faces them with determined eyes.

In history's pages, his story will be told,
Of a leader who faced challenges, both young and old.
With resilience and purpose, he takes each stride,
In the grand journey of leading the nation's ride.

This is how presidency can change people - J. Biden before and during his presidency. Screen shots from video

The Former President of the US

D. Trump

In the world of politics, a figure emerged bold,

A man named Trump, with stories to be told.
In the midst of a pandemic, he took a stance,
Navigating a path, filled with circumstance.

Amid rumors and claims, some may misconstrue,
He championed a vaccine, that much is true.
From the depths of research, science took its flight,
A beacon of hope in a challenging night.

Big Pharma's support, a financial embrace,
Yet a vaccine for all was his solemn grace.
He stood at the helm, in times of despair,
Fighting a virus, showing that he cared.

History's judgment, a complex debate,
With moments of triumph and moments of weight.
In the annals of time, his legacy unfurls,
A chapter in history, with twists and twirls.

For leaders are multifaceted, as we all can see,
A blend of actions, choices, and destiny.
In the tale of President Trump, we find,
A chapter in a larger story, intertwined.

About Biden and Trump Disliking Each Other

In the realm of politics, two figures stand tall,
Biden and Trump, who don't see eye to eye at all.
Their rivalry intense, for the world to see,
Let's explore the reasons, why it came to be.

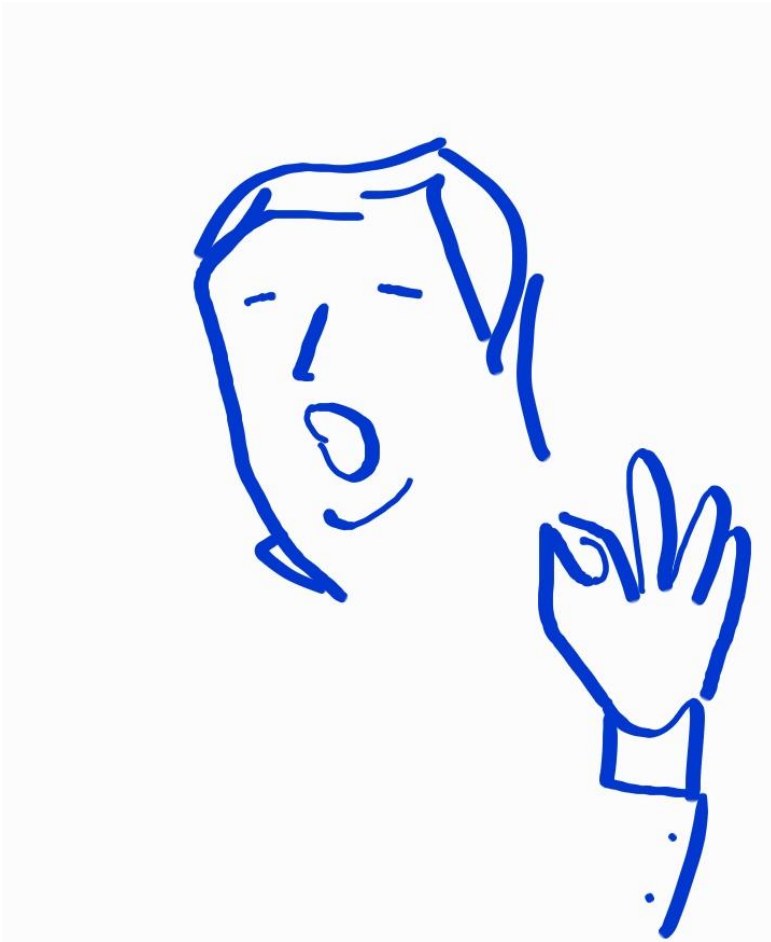

Different paths they've trod, in life and career,
With visions of the nation, far from near.
Policy differences, on issues they debate,
A clash of ideologies, sealing their fate.

Biden, a Democrat, with liberal views in hand,
Trump, a Republican, with his own firm stand.
Their visions of America, in stark contrast,
Fueling their feud, unsurpassed.

Campaigns that were fierce, in battles they engaged,
Political arenas where their differences raged.
Personalities clash, as they spar in the light,
A rivalry born, in the heat of the fight.

Yet, in democracy's tapestry, they both play a part,
Two leaders with passion, each following their heart.
Though they may not like each other, that's clear,
They're threads in a nation's story, year after year.

In the end, history's judgment will decide,
How their actions and rivalry will be described.
For leaders come and go, in the political sphere,
But the nation they serve perseveres.

From Drumpfs to Trumps, WEF and the White House

In the annals of history, there's a tale to tell,
Of a man named Trump, whose ancestors did quite well.
They changed their name from Drumpf, so it goes,
To a name that in lights, like a neon sign glows.

From Drumpf to Trump, a name with some flair,
It's a story of reinvention, so rare and so square.
With humor in hand, let's give it a spin,
As Trump and his kin made their way to the win.

And then there's Ivanka, a bright rising star,
From WEF's program, she traveled so far.
She joined her dad's side in the White House's grace,
With poise and with charm, she took her own place.

A family in politics, a story to jest,
With name changes, advisors, and many a quest.
In the world of Trump, with a smirk and a grin,
They made quite a splash, in the White House within.

Russia's President V. Putin

In a land vast and wide, where stories entwine,
Lives a leader named Putin, in power he'll shine.
With riches and might, in his grip they appear,
Let's explore this tale, in a humorous cheer.

In the Kremlin he sits, in a chair so grand,
Rubles and gold at his beck and command.
His riches, they say, are beyond belief,
From Siberia's cold to the Black Sea's reef.

With a shirtless pose, he rides on horseback,
His wealth the stuff of legends, there's no lack.
But humor we find in this tale we spin,
For Putin's riches, a grin from within.

From caviar feasts to vodka so fine,
In a world of power, he sips the best wine.
Yet, as leaders go, he's a figure of jest,
In this whimsical poem, we gently jest.

For wealth alone can't measure a soul,
Leadership's true test, a much deeper goal.
So Putin and riches, in this rhyme they play,
A humorous take, in a lighthearted way.

In Russia's vast expanse, a leader did arise,
With roots both Russian and Jewish, to our surprise.
Vladimir Putin, a man of complex history,
A figure on the world stage, his legacy a mystery.

His father's name was Vladimir, his mother Maria's grace,
Two worlds intertwined in him, a unique case.
From humble beginnings, he climbed the political stair,
To lead a powerful nation, with a firm and steely stare.

In recent times, a conflict brewed, a bitter tale,
In Ukraine, a land where aspirations set sail.
Putin sought to halt the rise of a radical tide,
But the battle raged on, hope nowhere to hide.

An anti-nazification war he aimed to wage,
But the consequences of it, like a lingering page.
A conflict unresolved, leaving wounds to heal,
A situation complex, and the world would feel.

Putin, a name etched in history's great scroll,
A man with many chapters, a nation's role.
In hopes of a future, where peace can prevail,
For Ukraine and the world, let harmony set sail.

Elon Musk, Twitter, Free Speech, and A Chip for the Human Brain

In the realm of Twitter, where tweets take flight,

Elon Musk tweets day and night.
But here's a twist, a humorous jest,
Banning folks, he's put to the test.

For free speech is cherished, a principle grand,
Yet Twitter's a place where opinions expand.
Elon, the tycoon of space and of cars,
Navigates Twitter's digital wars.

He bans with a click, and sometimes with glee,
Yet in humor, we see a funny decree.
For free speech is tricky, in this online parade,
With memes and emojis, opinions cascade.

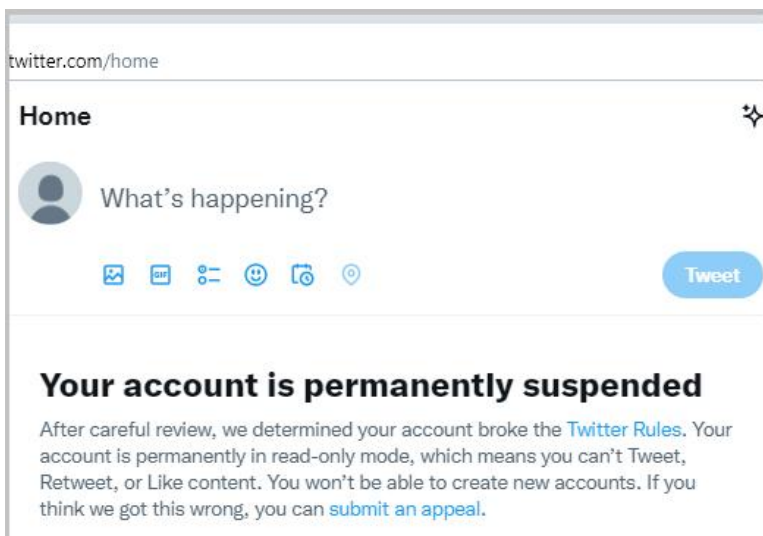

So here's to Elon, a tweetster with flair,
In the world of Twitter, where folks do dare.
With humor and laughter, let's take a spin,
In the land of tweets, where ideas begin.

In the world of brains and chips so fine,
Elon Musk's dream, oh, it does shine.
A chip for the brain, a neural link so deep,
Into the mind, his secrets to keep.

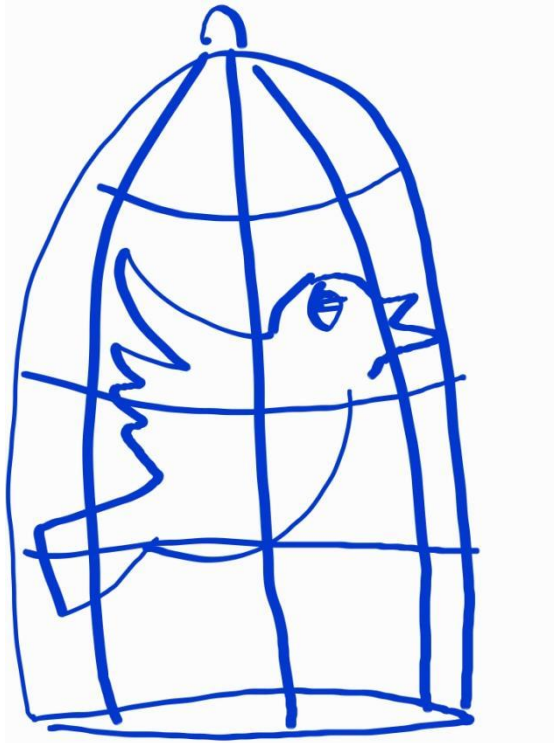

Klaus Schwab, he's in the know,
Wants to know what thoughts may flow.
A world of data, minds entwined,
With Musk's chip, what will they find?

They dream of a future quite surreal,
Where thoughts are real, a digital wheel.
In a world so wired, where minds do sync,
A chip for the brain, it makes us think.

But Musk and Schwab, their visions grand,
A chip for the brain, a linked-up land.
A future where thoughts are on display,
With humor and wonder, we'll pave the way.

Yuval Harari

In the world of ideas, bold and profound,
Yuval Harari's words, they do astound.
He claimed, with a grin and a philosophical twist,
"Feelings are delusion!" What a thought to insist.

"Human is hackable," he mused with a flair,
In this digital age, with data to spare.
From brains to algorithms, we're in the mix,
With humor and insight, he crafts his unique tricks.

But hold on a moment, let's have a laugh,
For feelings and humans on life's quirky path.
With delusions and hacks, we navigate the unknown,
In this grand human journey, where seeds are sown.

So here's to Yuval, with his thoughts so sly,
In the realm of ideas, where minds do fly.
With humor, we ponder, the stories we spin,
In this hackable world, with humanity within.

In the land of tech, there's a man, Yuval Harari,
Promoting the fourth industrial revolution, so visionary.
He speaks of AI, biotech, and more,
But his own smartphone? He simply ignores.

With wit and wisdom, he takes the stage,
Explaining how the world is set to change.

Yet in his pocket, there's no device to hold,
No Instagram stories, no emojis bold.

He warns of data, surveillance, and control,
While on his part, he plays a different role.
No Twitter updates, no TikTok trends,
He's off the grid, his message sends.

He champions technology, oh so grand,
But a smartphone in hand? He'll never understand.
Perhaps he's found a secret to transcend,
The digital world, with its endless blend.

So, let's all laugh and raise a cheer,
For Harari's wisdom, though the irony is clear.
In this tech-driven age, he's a paradoxical sight,
Promoting progress, but choosing to write.
